

WHY REPAIR LEAKS?

- ◆ A small water leak may not seem like much at the time it is discovered, but over time it can add up.
- ◆ In fact, a small leak in faucet piping of just 1/16" can waste up to 170 gallons in just 24 hours. That's over 5,000 gallons in just one month!
- ◆ Please help conserve water by repairing all the leaks you find immediately.

ARIZONA WATER COMPANY

WATER WASTE

Gallons leaked per month at 40
pounds pressure:

<u>Leak Size</u>	<u>Gallons Lost</u>
1/32"	5,100
1/16"	29,100
1/8"	108,000
